The article "Digital UAE - a platform for demographic processes management" (Oct 20, 2023) describes an interesting method of forecasting demographic trends developing the Digital UAE twin. Development of experiment scenarios is well supported with prior research. However, the article could be improved by further elaborating the Discussion section and providing clearer theoretical and practical implications of the work. The scientific problem and hypothesis could be more clearly stated. The demographic problem explained is relevant to UAE – the paper does not make it clear how the model and deployed scenarios contribute to scientific knowledge beyond the country examined.
