Potential competing interests: No potential competing interests to declare.

Below is my review of "American Mission in Afghanistan: Geopolitical Interests, Strategies & Reasons of Failure." The abstract is not clear as it failed to explain the purpose of the study, methodology, major findings. The paper also lacks a clear introduction or thesis statement. It also failed to provide theoretical foundation. In some places the author used Ibid instead of original reference. References are bit outdated so the author need to update them.

Finally, the paper needs final proof reading. There are grammatical mistakes. In short, this manuscript is accepted with minor changes.
