

# Review of: "Knowledge, Practices and Attitude of Residents towards Buruli Ulcer in Jasikan Municipality: An Ethnographic Study"

Stefano Veraldi

Potential competing interests: No potential competing interests to declare.

This is an interesting study. However:

I think that the sample is small.

It is necessary to give to the reader more news about Buruli ulcer: aetiology, mechanisms of action of Mycobacterium, clinical presentation and location, gender and age of the patients, diagnosis, therapy,...

I suggest to add a map of the region in Ghana.

I suggest to delete "oedema" here and there.

The text is pointlessly long.
