Potential competing interests: No potential competing interests to declare.

This study sounds to be a good fundamental context and competitive contribution for developing SMEs in your geographical area. However, some unclear view points should be more clarified.

- 1) Corn business as mentioned to be SMEs should be clarified in term of characteristics of business operation, business process, relative stakeholder, and how to generate any profitability. This may make more understanding and clearer scene for this business in your country.
- 2) To present your research significance and problem excluded in corn business is an necessity. Some of your given evidences are or related with your variables such as internal and external environment for strong entrepreneurship.
- 3) Your research methodology needs to be more identified. Mixed method as quantitative and qualitative approach, is found into you explanation. It is therefore to present both step-by-step following your research objectives and additionally with its findings. For instance, starting with firstly of quantitative research, presenting your objectives, research equipment, measurement, data analysis, findings etc. Then, you employed qualitative approach to reach deeply understanding in some context and figure out to verify quantitative approach findings.
- 4) Population and sampling frame seem to be unclear. Please identify into more details.
- 5) You have to present how to construct and formulate your measurement through your research equipment.
- 6) I the measurement, it needs to explain more specific direction in rating scale as 5= Strongly Concerned/Emphasized, and 1= Strongly NOT Concerned/Emphasized. This helps your respondents to respond directly what data you prefer.
- 7) With your research objective, sub-elements or independent variable in entrepreneurial orientation could be presented in your regression equation, and dependent variable as company performance is employed. However, the sample size and general assumptions (multicollinearity, autocorrelation) must be proved.
- 8) In presenting your summary and conclusion, it needs to be represent the linkages among research background, research significance & problem, research objective, and used statistics together.
