**Potential competing interests:** No potential competing interests to declare.

The authors had considered an important economical issue but restricted to a particular Geographical Region. Authors in this research work had highlighted certain issues related to the financial profit from the agri business. I feel the authors can be more precise by providing the names of techniques or tools. The procedures which helps in sustainable growth there by increasing the productivity. This will help the researchers who are also working in this field. It will also increase the visibility of the research work. Latest techniques like IoT or AI can be used but i feel the authors had provided their insight in an ambiguous vague format. More justification on how the country like Kyrgyzstan can be more economical sustainable and be independent. Also it will be more effective if the authors specify relevant Management methodologies or supply chain management policies for Kyrgyzstan so it becomes strong and dominant in the central Asian region.
