

Review of: "Surgical Considerations For Vitreous Opacities"

Zhaoyang Wang

Potential competing interests: No potential competing interests to declare.

The title shows that the author focuses on surgical treatment of vitreous opacities. However,

the purpose of manuscript is “an overview of symptomatic vitreous opacities and their treatment options, discussing best practices for identification of patients for surgical treatment, reviewing surgical pearls for vitrectomies and the role of laser treatment and photoablation by nanoparticles, as well as surgical management for proliferative diabetic retinopathy and its complications such as vitreous hemorrhage, tractional retinal detachment, macular hemorrhage, and edema, and offering further clarity regarding the treatment approaches for optimizing outcomes for patients having vitreous opacities.”

It's unconcise, and not sure why vitreous opacities and proliferative diabetic retinopathy are included together.
