**Potential competing interests:** No potential competing interests to declare.

The topic is interesting as it is a new area in the field. The introduction is explanatory about the subject. However, the findings of the research conducted to address the research questions identified in the following sections were not written. The way of writing used in the study seems to have sought answers to the research questions in the introduction. It would be good to rework this in accordance with the article format. The findings section can be written accordingly. In the results and discussion section, the findings should be discussed. Although the topic is interesting, the fact that the study is reported in this way is not enough to be published in this journal. It would be more appropriate to conduct a more detailed study of this research and rewrite it.
