**Potential competing interests:** No potential competing interests to declare.

This article is about the role of chatGPT in the film industry, which is one of the important topics that attract readers' attention. Fascinating topic but too short in length to explain the topic.

1. Overall, the article needs to describe what features the film industry needs and what features chatGPT will contribute to in more detail. ChatGPT is driven by Artificial Intelligence (AI) technology and a subset of AI, utilizing Nature Language Processing. The author needs to separate these two technologies since the topic of this article is chatGPT.
2. I wonder if chatGPT offers Data analytics, Predictive analytics, or Virtual assistants. ChatGPT is limited because we cannot upload data to it beyond any information that can be input as text, according to Forbes (2023).
3. The author would be better at explaining his/her opinion in more detail. For example, "it is important to use ChatGPT in a responsible and thoughtful way, understanding its capabilities and limitations and being aware of its potential impact on the industry." A reader might wonder how to use it responsibly and thoughtfully and your assertion. You should not conduct research as a black box. Just guide a reader to understand and repeat your research.
