Dear Author

Your manuscript titled "**An Intelligent Analytics for People Detection Using Deep Learning**" has some points to be highlighted to improve its quality.

1. The paper is not professionally organized. Most of the paragraphs in the introduction section contain general information. Many claims in the manuscript are without supporting references.
2. The gap in the relevant work has not been identified so that it can be filled by this research.
3. The literature review is insufficient. Moreover, it has not been analysed to support the research problem.
4. The author presents a comparative study of detecting people's behaviour using three models: Convolutional Neural Networks (CNNs), You Only Look Once (YOLO), and Faster RCNN. Therefore, the title of the paper should reflect this work.
