The work is well written and well conducted. The methodology is adapted to the problem, and the conclusions are realistic and interesting. I consider the work suitable for publication. I just recommend avoiding the same terms in the title and keywords. I also recommend using the PLIP server-

Protein-Ligand Interaction Profiler (<https://plip-tool.biotec.tu-dresden.de/plip-web/plip/index>) to obtain more details of the interactions between the complexes and enrich the results and discussions of the article.
