**Potential competing interests:** No potential competing interests to declare.

The title of the paper is not matching with the study and the conclusions

Introduction is quite repetitive

The paragraphs from the Results section are basically about the Introduction section.

The study requires to mention the sample and what type of sampling method were chosen.

What was the question items and what were the response scale used in the questionnaire

How was the questionnaire developed and validated

Why did you choose to discuss one division of the questionnaire

What research methods were applied is missing from the paper
