

Review of: "Impact of risk factor diabetes mellitus on patients with periodontitis"

Dr. Shilpa Duseja

Potential competing interests: The author(s) declared that no potential competing interests exist.

Dear Author,

This comprehensive review has been well compiled but it is suggested to redraft the manuscript with subheadings for different aspects like pathogenesis, effect of confounding variables, effect of treatment regimens etc.

Also, patient centric information catering to clinical needs like the appropriate antibiotics regimen, effect of host modulatory agents and other treatment modalities which can exert effect on glycemic as well as periodontal status can be added for reinforcing the strength of association.
