Chronic Active EBV Infection of T-and NK-Cell Type, Systemic Form

National Cancer Institute

Source

National Cancer Institute. *Chronic Active EBV Infection of T-and NK-Cell Type, Systemic Form*. NCI Thesaurus. Code C126348.

An on-going Epstein-Barr virus (EBV) infection characterized by repeated infectious mononucleosis-like symptoms, a very high titer of anti-EBV antibodies, and high levels of Epstein-Barr virus nucleic acids. Patients with CAEBV often develop progressive cellular and humoral immunodeficiency with pancytopenia and hypogammaglobulinemia.
