Renal Cysts and Diabetes Syndrome

National Cancer Institute

Source

National Cancer Institute. *Renal Cysts and Diabetes Syndrome*. NCI Thesaurus. Code C123018.

Monogenic diabetes caused by inactivating mutation(s) in the gene HNF1B, encoding hepatocyte nuclear factor 1-beta. In addition to diabetes, this condition may be associated with renal cysts and urogenital anomalies. Homozygous HNF1B mutations result in permanent neonatal diabetes.
