Potential competing interests: No potential competing interests to declare.

I would like to congratulate the Author for good and interesting work. However, some issues need to be addressed in making the article readable and impactful.

Abstract

The abstract should only contain the summary information of the following
Main objectives of the study, methods used, important findings and conclusion

Background of the study

The background information does not address the problems under investigation. I suggest you rewrite the background with consideration of the following:

- * Emerging technologies and their merits that lead to their wide use in academic
- * Existing studies in understanding how emerging technology is used in academic
- * Issues and challenges in these studies that lead to the development of the research question
- * What this study is about

Literature review

This section lacks the justification of the model used in this study and related literature in reflection on the research objectives. I suggest better separating this section into two parts;

- 1 – Reviewing of Related literature (Emerging technologies and academic use of emerging technologies)
- 2 – Research model and Hypotheses Development

This section provides a detailed description of the chosen model, and why this model, then includes the conceptual framework used in the study (UTAUT) and hypothesis development based on the selected constructs of the model

Methods used

The author(s) should make this section operational. Consider providing the research design and methods used, a description of the data collection instrument, and data reliability.

Results

It is important to measure the internal consistency reliability of the measurement constructs as your study adopts the Likert scale.

Data presentation in a Table consider using an APA style which help to easy understanding; where possible separate

them into different theme.

Discussion

This section requires a more detailed explanation of your findings and links with the existing studies, where possible providing the inconsistency that exists.
