Potential competing interests: No potential competing interests to declare.

-the topic of the article is interesting, and writing a review is sometimes difficult than writing a regular paper;

-I believe that the presence of an Introduction is a must. I do not really understand the need to describe the DFU symptoms at the beginning of the article;

-if there is more interest in approaching the effects that *Ganoderma* species has on bacteria resulting from DFU, then, the title of the article should be changed; I also noticed that the Conclusion chapter also refers to DFU;

-I appreciate Table 1 (although it is not cited in the text), where the results are much more condensed;

-there are some spelling errors and/or some terminology confusions (e.g. *Ganoderma* termed as a plant instead of mushroom; *Aspergillus niger* termed as bacteria instead of fungus etc.), but is difficult to emphasize all of them.....I suggest using line numbers, as it would be easier to refer to each phrase.
