Potential competing interests: No potential competing interests to declare.

I suggest making these adjustments to your abstract:

1. Outline the study's scope, including the location, types of institutions, or fields of study.
2. Describe your mixed-methods approach, such as surveys or interviews, for a clearer research overview.
3. Highlight key findings, especially any specific benefits or challenges.
4. Incorporate numerical details, like the number of educators, AI adoption rates, or statistical significance.
5. Mention the transformative potential of AI, focusing on one significant impact area if space allows.

The study offers valuable insights on AI in higher education, but could benefit from:

1. **Direct Impact Analysis:** Assess how AI tools affect learning outcomes (engagement, retention, achievement).
2. **Participant Diversity:** Include educators with wider experience for a broader perspective.
3. **Ethical Concerns:** Deepen discussion on specific ethical issues and propose solutions.
4. **Comparative Analysis:** Compare AI tools to traditional and other digital teaching methods.
5. **Validated Training Programs:** Provide evidence on how teacher training programs for using AI effectively can be best designed.
