

Review of: "Assessment of Microbiological Quality, Phytochemicals, Trace Elements and Proximate Analysis of Bio-Clean II Herbal Remedy"

Minhui Li

Potential competing interests: The author(s) declared that no potential competing interests exist.

The whole article is more meaningful, but the following aspects should be paid attention to:

1. It is suggested to add the description of "Bio-Clean II Herbal Remedy", but there is no corresponding description in the paper, which caused confusion during reading.
2. The description of sample collection in "Source of Test Herbal Products" was too general. It only said that samples should be collected from relevant manufacturers according to requirements, but did not describe the specific content and quantity of Herbal Products.
3. In the section of "Microbiological Quality", the text describes 4 batches of samples, but the serial number of 5 batches of samples exists in the table;
4. In the "Discussion" part, the description is relatively scattered. It is suggested to combine the same type of detection and analysis into one paragraph according to the subject content, and there are some overlapping contents with the introduction, which is suggested to be simplified.
5. The "Conclusion" part is simple, and it is suggested to add in-depth content.
