# GAIA Level 1 Cesarean Scar Pregnancy

National Cancer Institute

## Source

National Cancer Institute. *GAIA Level 1 Cesarean Scar Pregnancy*. NCI Thesaurus. Code C128750.

GAIA Level 1 Cesarean Scar Pregnancy is defined by a transvaginal ultrasound that demonstrates the following five findings: first, an empty uterine cavity; second, an empty cervical canal, without contact with the gestational sac; third, the presence of a gestational sac, with or without a fetal pole, with or without cardiac activity, in the anterior uterine segment adjacent to the cesarean scar; fourth, an absence of or a defect in the myometrium between the bladder and the gestational sac; fifth, a well-perfused gestational sac as demonstrated by Doppler ultrasound (to differentiate from an expelling, avascular gestational sac). Alternatively, Level 1 may be defined as a hysterectomy specimen with evidence of a pregnancy implanted into the cesarean scar.
