Potential competing interests: No potential competing interests to declare.

- The topic of the paper is very important and their results showed that increased LSD1 expression is associated with poorer survival in patients with triple-negative breast cancer.
- The design of the work is good and the results are encouraging.
- The information provided in the manuscript does appear to be clinically significant to warrant its publication.
- The number of cases is sufficient.
- There are no language or grammar mistakes.
- The tables, figures, and discussion are good.
- The references are sufficient and fairly recent.
