Dear Author

This is a good paper, I think, you need to improve this paper more as following point:

1. Add references/citation in the introduction part.
2. In the methodology: you need to add more information: where are your data come from, how you collect data and where, number of sample size/sampling method and reorganize the structure of your writing
3. Results and Discussion: Please revise the tables in the results. Make more simple that other people can understand (you need to look at similar paper). Please also check if the results of your paper can answer all objectives
