Chordoid Glioma of the Third Ventricle

National Cancer Institute

Source

National Cancer Institute. *Chordoid Glioma of the Third Ventricle*. NCI Thesaurus. Code C5592.

A rare, slow-growing neuroepithelial neoplasm of uncertain origin affecting adults. It is located in the third ventricle. It is characterized by the presence of epithelioid cells which express GFAP, and mucinous stroma which contains lymphoplasmacytic infiltrates.
