## Abstract

- Measles is a disease, not a virus. Please refer to the current ICTV nomenclature (*Measles morbillivirus*). So modify accordingly from the abstract...
- Measles virus short form is MV not MeV
- ribonucleic acid (RNA) - RNA alone is sufficient (known acronym ... expansion is not required)
- MeV from a 13-year-old serum sample — is it serum samples from 13 year old patient?
- United States of America (USA) - either write United States of America or USA not both
- Shortly after, ... remove it
- Smallpox - smallpox
- The introduction of MMR immunisation previously and after reduced mortality to around 110,000 annually.?? ...The introduction of MMR immunisation reduced mortality to around 110,000 annually.
- The rates of MeV disease since 2017 ... MeV (MV) is a virus not a disease so use of measlesles would be appropriate
- Smallpox (VARV)??? here expansion is required
- So, there is a lot of scope in improving the MS. I would like to review the MS after pruning
