A second-generation selective leukotriene B4 receptor (LT B4R) antagonist with potential antineoplastic activity. Although the exact underlying mechanism through which LY293111 exerts its effects has not been fully elucidated, this agent selectively binds to and blocks LT B4Rs, thereby inhibiting the downstream signalling pathway. LY293111 has been shown to induce apoptosis and inhibits cellular proliferation in LT B4R expressing cells, such as pancreatic cancer cells.
