The manuscript has been well written, however kindly consider revising it on the basis of following suggestions:

1. In the abstract, the results must be written in a concise manner stating the findings, their mean and SD and level of significance. Avoid repetition.
2. In the abstract, the prevalence may be written comprehensively. Try to paraphrase in such a manner to avoid complex sentences.
3. The authors must consider mentioning the sample size calculation.
4. The authors may consider mentioning if they used a control group.
5. In the exclusion criteria, what do you mean by mentally unsound?
6. Instead of using the term data collection tool, authors may consider replacing it with "Procedure for Data Collection"
7. The discussion includes all points needed however the presentation and flow could be improved. Avoid too short paragraphs and try to maintain the flow and connect between the paragraphs.
8. The authors may add few more recommendations for future research.
9. The manuscript may require a statistician's review to check the statistical measures used.
