Author must focus on the following points to enhance the paper:

1. Abstract should contain the problem identified, proposed methodology and it should summarize the effectiveness of it using quantitative values.
2. Should add more number of recently published ideas in related works section
3. Author should add a summary of how the paper is arranged at the end of the introduction section.
4. Description about the dataset used for simulation and what type of data used for the study should be added.
5. Figures should be replaced with high resolution and good quality to enhance the readability of the user.
