Comments for authors:

Dear authors,

Thank you for inviting me to review this paper. This paper is simple and has novelty. Below, the authors can find my comments to improve this paper.

1. The abstract is so long, and it didn't discuss the research recommendations and implications
2. This research lacks clarity of goals, objectives, or research questions
3. Methodology parts need to be rewritten. The researchers did not discuss the research design
4. The results part is not clear
5. The researchers must add studies related to the study scope and aims to come out with the differences and similarities between the current study and previous studies
6. In the discussion and conclusion parts, I did not see any implications for practice and/or policy in teaching Mathematics
7. References in this paper are very lacking. This raises the question of whether this paper builds based on previous research and is supported by previous research
