PKC-alpha Antisense Oligodeoxynucleotide ISIS 3521

National Cancer Institute

Source

National Cancer Institute. *PKC-alpha Antisense Oligodeoxynucleotide ISIS 3521*. NCI Thesaurus. Code C1788.

A synthetic phosphorothioate oligodeoxynucleotide. As an antisense molecule, ISIS 3521 hybridizes to the 3-untranslated region of the human protein kinase C (PKC-alpha) mRNA, thereby inhibiting PKC-alpha expression and growth of PKC-alpha-dependent tumor cells. (NCI04)
