

# Review of: "A Multi-factor Model of COVID-19 Epidemic in California"

Aba Diop

Potential competing interests: No potential competing interests to declare.

The article is well written and well presented.

The author can give a mathematical presentation of the model used (if possible).

The author may also use a validation or adequacy test for the model (such as Fisher's test).

Is there a linear correlation between the dependent variables (check for variance inflation factors)?

On page 5, in the equation for the variable "Duration", the unknown "x", which should represent the dependent variable, is missing.
