Potential competing interests: No potential competing interests to declare.

Overall, the manuscript is focused on interesting research.

In principle, it is written in an acceptable way.

However, before publishing, the following minor revisions should be made:

- nomenclature: "omega" is the propeller angular velocity,
- nomenclature: it does not include all quantities. Add the quantities (together with units): $\dot{m}$, α , w , A ,
- nomenclature: add units for " v ",
- figure 5: add references to the individual bodies shown in the figure.
