Potential competing interests: No potential competing interests to declare.

- 1.- It is an interesting research work, but there is a lack of chemical characterization by HPLC masses or other methodologies that identify the components of the juice used.
- 2.- It would be desirable to identify the plant by molecular biology.
- 3.- Explain the parameters used to select juice doses and explain the unit used.
- 4.- Explain how the sample size was selected. Why did you use 4 animals per group?
