

# Review of: "Fear Factors in Open Spaces – Children's Perception of Public Open Spaces"

Parama Mitra

**Potential competing interests:** No potential competing interests to declare.

The topic is interesting and relevant. The method used although not very technical yet uses some conventional methods to understand the users perspective. The sample size is 105, although not robust yet is enough to start an understanding towards the concept.

Literature review is also very good. Overall worth publication with a few modifications ( like including - identified parameters of safety/ unsafety) and statistical interpretation if possible.
