

Review of: "Neurotherapeutic Comparison of Aripiprazole and Ethanolic Extract of *Fragaria Ananassa* on Cerebrum and Amygdala of Methamphetamine Intoxicated Male Wistar Rats"

Ratchaniporn Kongsui

Potential competing interests: No potential competing interests to declare.

There are some main issues that need to be addressed.

1. The rationale behind the experiments remains unexplained.
2. The author should rewrite with more details in each part, especially the introduction and discussion parts, which lack scientific data.
3. Should add more information on neurobehavioral tests in the materials and methods part.
4. The results should be presented as graphs for more understanding.
