**Potential competing interests:** No potential competing interests to declare.

Thank you for giving me the opportunity to review this article. The article sought to answer many important issues related to nursing care and well-being during the pandemic. I thought there were a few things that the authors could have looked at in greater depth.

To the question of *ability to fully comply with infection control measures* the answer no was given by 78% of the respondents.

There was no further discussion about this answer, I am left wondering if the ability to fully comply with infection control measures affected the answers given for the questions on the use of FFP masks, visors and glasses and use of gown.

Under the heading: *The most issues while performing nursing care during the pandemic* an answer that was included and seemingly significant was incompatibilities between colleagues. This topic was not addressed in the introduction or discussion, so I am not sure why it was added to this table. Should it have, based on the significance of the response been spoken about at some point in this paper? Could this be a topic for another project?
