

Review of: "Building Design Parameters for the Safety of Individuals with Autism Spectrum Disorder"

R.D. Shirwaikar

Potential competing interests: No potential competing interests to declare.

The efforts in putting things are good in the paper but need to be clear with references.

- 1- Original contribution is not highlighted in the paper
- 2- Quantitative or statistical approach in the paper would have helped more in proving statements.
- 3- Inclusion of how to train the ASD person to handle the environment.

Need to be addressed.
