

Review of: "Cloud-based geospatial services for building capacity and safeguarding heritage in climatically marginal landscapes"

Christopher Uche Ezeh¹

¹ University of Nigeria

Potential competing interests: No potential competing interests to declare.

Abstract: It is well written.

Structure: well structured.

Introduction: clearly written stating the objective of the study and the import of the study. However, in Figure 1, you wrote 'the two.....also shown'. It seems hanging, so I suggest you indicate the colour the two study sites are shown or highlighted.

Study area: Well described but should have given a detailed maps of the study sites showing important communities and key heritage sites. This will add value to your description of the study sites.

Methods: well presented.

Results and discussion: This section is well written and clear.
