

Review of: "Factors Influencing the Laptop Buying Behavior of Students in Vietnam"

Thuy Nguyen

Potential competing interests: No potential competing interests to declare.

Thanks for giving me an opportunity to review this manuscript. I have some comments below. I hope they are helpful to authors.

1. This article analyzes the factors that influence the laptop-buying behavior of Vietnamese students. However, the survey subjects were only concentrated in one large city, Hanoi in Vietnam, so the article title could clearly state "Factors Influencing the Laptop Buying Behavior of Students in Hanoi, Vietnam" or "Case in Hanoi".
2. The abstract should clarify by providing the research background, methods rationale, results, and important implications.
3. In the "Introduction" section, the novelty and author's contributions should be clarified.
4. The literature review is important for showing that the authors are familiar with relevant research literature for the proposed field. You should explain why you have used those methods?
5. Hypotheses are given in the Theory section, but the results section does not show the conclusions of these hypotheses.

Thank you for taking the above comments into account. I hope those are helpful.
