FLOT2 wt Allele

National Cancer Institute

Source

National Cancer Institute. *FLOT2 wt Allele*. NCI Thesaurus. Code C68601.

Human FLOT2 wild-type allele is located within 17q11-q12 and is approximately 18 kb in length. This allele, which encodes flotillin 2 protein, is involved in the maintenance of caveolae structure, cellular adhesion and neuronal signaling. The determination of the level of the expression of the wild-type allele may be utilized to characterize early carcinogenesis.
