# Immunoconjugate

National Cancer Institute

## Source

National Cancer Institute. *Immunoconjugate*. NCI Thesaurus. Code C1512.

An agent that consists of an immune substance, such as a monoclonal antibody, antigen or an immunoglobulin, and covalently bound to other molecule(s), usually either a toxin, a radioisotope, or a cytotoxic agent. Immunoconjugates allow for specific delivery of certain substances to specific cells or tissues for diagnostic or therapeutic purposes.
