It's an interesting topic and study. But I am happy if you revise the comments that I am listing below:-

1. Please its not recommendable to put references under the abstract section.
2. In result section of the abstract you wrote as sixty %; please write it in a similar fassion either sixty percent or 16%.
3. The last sentence under conclusion part is also not clear. Do you think patients have difficulty of understanding due to asymptomatic feature of the Sxs??
4. References could be written in a range like (1-5) than listing all the references
5. Under background section it says scarcity of studies redundantly. So please omit one(the last two paragraphs)
6. In result section table four you reported 'zero' for no. Since the patients are basically hypertensive its not required to report those who don't have hypertension.
