

Review of: "Modeling the structure and evolution of cultural information as Quasispecies"

Anjali Gupta

Potential competing interests: No potential competing interests to declare.

This work describes how cultural evolution could be considered within the framework of the evolution of information, that includes biological evolution also. While the work is interesting there could be some improvements in the article:

1. It would be useful to include a schematic to summarise the article. It would be easier for the readers to understand it.
2. As we are moving towards more and more automation in various walks of life, how would that influence the cultural evolution? It would be useful to analyse that and add as a future perspective.
