Review of: "Factors Influencing Coffee Shop Visitors' Non-Verbal Communication Experience Based on the Choice of Colour and Interior Design Elements"

Chi-Jui Tsai¹

1. Ming Chuan University, Taiwan, Province of China

The topic is interesting and has research value. The following are personal thoughts and suggestions after reading: 1- The scope of the research can explain whether the color or color temperature of the coffee space sample is mainly based on the color temperature of the lighting, or includes the color of the lighting and space configuration, because if the lighting color temperature is biased toward warm or white, the color of the interior configuration of the space will affect the original color due to color temperature. 2- If you can attach samples or photos of the space, you can explain the completeness of the research more clearly. 3- Whether the lighting of the space sample is evenly configured or unevenly configured, different ways will affect the space atmosphere, comfort, social warmth, emotion, familiarity, and relaxation. The results of the study will also vary depending on the lighting configuration.
