Review of: "Investigation and Synthesis of Benzothiazole-Derived Schiff Base Ligand Against Mycobacterium tuberculosis"

Jijo Johnson¹

1. Independent researcher

First of all, I thank you for giving me an opportunity to review this article. In my opinion, the article should be revised before publication.

1. The compound is not characterized well. In the revised manuscript, kindly incorporate the elemental analysis data, ¹³C NMR data, melting point, and solubility details of the synthesized compound.
2. Kindly rewrite and improve the readability of the introduction part. It looks like it was written by some AI tool.
3. Kindly incorporate the mass fragmentation pattern of the compound.
4. The authors only reported the in silico study results. Kindly add experimental results also in the revised version and compare them with the in silico results and previous reports.
