Dear Authors,

I found the research is not up to academic standards; however, it is eligible as a technological development test.

Major problems:

There are no statistical comparisons in the article. Standard errors or standard deviations are not shown. There are no descriptions of spatial research design, sampling, statistical objects, used statistical methods, or number of repetitions or controls for comparison.

Disease names should be used as internationally accepted and clarified with scientific names.

Figure 2 should be translated, and a legend should be added to it.

Minor problems:

Abbreviations should be written out too in the first occurrence.

There are numerous translation errors, e.g., chromosomes, tree.

I recommend the use of the word "site" instead of "point."

Please attach inside photos of the growing apparatus to Figure 1.

In paragraph 2.2.2., you mention a diagram about the drip irrigation system design, but there is only a description below. The description is enough; in this case, the word "diagram" should not be used.

**In conclusion, I do not recommend this article for publishing in the present form.**
