

Review of: "Food Intolerance and Sensitivity Are Associated With Chronic Musculoskeletal Pain in a Self-Selected Community Population"

Dilsat Bayrak

Potential competing interests: No potential competing interests to declare.

1-Firstly, I appreciate the research you have done on this issue.

2- I think you should replace ' chronic musculoskeletal pain' to fibromialgia in the title. That does not mean the same thing

3- did you have any exclusion criteria? Are those patients have any gastrointestinal disorders? Any abdominal surgery? Concomittant drug use? Are they on any special diet (vegetarian?-vegan? ...) use of any supplements or herbal medicine?

4- I think food sensitivity *allergy/intolerance* should be defined more clearly. And duration of these symptoms can be important
