**Potential competing interests:** No potential competing interests to declare.

In the abstract, the author gave an understandable overview of the topic. In the methods, it was easy to understand what the researcher was trying to do and how to track the results. The results are fully detailed for most variables. The discussion of the results was also good, and the important points were not focused on. It is possible to add the type of study to the title of the research as a retrospective study. My best regards.
