

Review of: "Inhibition Success of a Virtually Created Molecule: Pseudoeriocitrin and Femtomolar Inhibition"

Sonal Dubey

Potential competing interests: No potential competing interests to declare.

The article is interesting, but has some points that need to be addressed:

1. There is no description of table 2 in the text.
2. What methods/software was employed for calculating the K_i values?
3. The validation of homology modelling and docking studies is missing.
