The article is well written. I do not have any remarks. I consider that the manuscript can be accepted in the present form. In the introduction, the authors present the main aim of the study. Materials and methods are well described regarding dental materials and further in vitro experiments and in situ experiments. Electron Microscopy, a modern method, was used for oral biofilm examinations. The discussion section explains the results obtained very well.

Taking into consideration all these aspects, I considered that the article can be published.
