Diffuse neonatal hemangiomatosis

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base*. [Diffuse neonatal hemangiomatosis](#). ORPHA:2123

Diffuse neonatal hemangiomatosis is a rare vascular tumor from unknown origin characterized by multiple, progressive, rapidly growing cutaneous hemangiomas (e.g. in the scalp, face, trunk and extremities) associated with widespread visceral hemangiomas in the liver, lungs, gastrointestinal tract, brain, and meninges.
