Potential competing interests: No potential competing interests to declare.

It seems that the authors made the requested corrections. However, the article may be suitable for publication with some corrections as stated below:

- The inside of the figures is generally not readable (for example, Figures 1 and 3).
- "Ref." when showing references, I think there is no need to point it out.
- Coefficient of Determination should be written as an exponent expression, not R2.
- Formulas of evaluation criteria should be added to the text.
- The format of the references seems not very appropriate. It should be examined and corrected.

Best regards,
